Proper-time branch on the equator, constant factor: $a = M/2$, $\hat{E}^2/A^2 = 2$ (numerical)
(a) minimisers and completion escape curve
$\delta = 0.9$
$\delta = 1.75$
$\delta = 2.6$ (not attained)
x_0
ring $r = 2M$
$r\sin\varphi/M$
$r\cos\varphi/M$
(b) Maxwell rule with a ring
shallow dips
deep dips
ring curves $W(\delta)$
infimum
δ_{ring}
δ_c
$\Phi_{\max}$
length $/(cM)$, $c = A^2/\hat{E}$
angular separation δ
